

#### MACHANICAL

- 1. For a reversible adiabatic process, the change in entropy is
- (a) Maximum (b) Minimum(c) Zero(d) None of the above

ANSWER: (c)

- 2. The entropy of an isolated system increases during a
- (a) Reversible process (b) Irreversible process
- (c) Ideal process (d) Polytropic process

ANSWER: (b)

- 3. The efficiency of a Ranking cycle
- (a) Increases with decreasing temperature of heat rejection.
- (b) Decreases with decreasing temperature of heat rejection
- (c) Decreases with increasing temperature of heat rejection
- (d) None of the above

ANSWER: (a)

4. Rankin cycle efficiency for a power plant is 29%. The Carnot cycle efficiency will be (a) Less(b) More(c) Equal(d) None of the above

ANSWER: (b)

- 5. Efficiency of the Carnot cycle can be increased by
- (a) Increasing the highest temperature
- (b) Decreasing the lowest temperature
- (c) Decreasing the highest temperature
- (d) Both (a) and (b) above

ANSWER: (d)

- 6. Air standard efficiency of Stirling cycle as compared to Carnot cycle is
- (a) Less
- (b) More
- (c) Same
- (d) None of the above

ANSWER: (a)

- 7. In actual practice, the Carnot cycle cannot be realized because(a) Very high pressure developed in the cylinder
- (b) High volume ratios in the cylinder
- (c) Both (a) and (b) above
- (d) None of the above
- ANSWER: (c)
- 8. Otto cycle consists of sets of processes
- (a) Adiabatic and constant volume
- (b) Adiabatic and constant pressure
- (c) Isothermal and constant pressure
- (d) Isothermal and constant volume
- ANSWER: (a)
- 9. Entropy of the universe tends to
- (a) Maximum
- (b) Minimum
- (c) Zero
- (d) None of the above.
- ANSWER: (a)
- 10. Entropy of water at  $0^{\circ}$  C is assumed to be
- (a) 0 (b) 1 (c) -1 (d) None of the above
- ANSWER: (a)
- 11. The Carnot cycle consists of two adiabatic processes and

- (a) Two isothermal processes
- (b) Two constant pressure processes
- (c) Two constant volume processes
- (d) One constant pressure processes

### ANSWER: (a)

- 12. Carnot cycle has maximum efficiency for
- (a) Petrol engine
- (b) Diesel engine
- (c) Reversible engine
- (d) Irreversible engine

### ANSWER: (c)

- 13. Number of processes in a Rakine cycle are
- (a) 3
- (b) 4
- (c) 5

(d) 6

ANSWER: (c)

- 14. A Stirling cycle consists of
- (a) Two adiabatic and two isothermal processes
- (b) Two adiabatic and two constant pressure processes
- (c) Two isothermal and two constant volume processes
- (d) Two isothermal and two constant pressure Processes

ANSWER: (c)

15. If other factors are constant, with increase in the temperature of source, the efficiency of cannot engine(a) Increases

- (b) Decreases
- (c) Remains same
- (d) Depend on temperature ratio

ANSWER: (a)

16. If other factors are constant, with increase in the temperature of sink, the efficiency of Carnot engine

- (a) Increases
- (b) Decreases
- (c) Remains same
- (d) None of the above.

ANSWER: (b)

- 17. Carnot engine is irreversible due to
- (a) Friction between moving parts
- (b) Losses from working fluid in transit
- (c) High speed
- (d) Both (a) and (b) above

ANSWER: (d)

- 18. Otto cycle is a theoretical cycle, on which
- (a) Only petrol engine run
- (b) Only diesel engine run
- (c) Only gas engines run
- (d) Petrol and gas engine runs

ANSWER: (d)

- 19. Compression ratio is
- (a) Total volume/swept volume
- (b) Swept volume/total volume
- (c) Swept volume/clearance volume
- (d) Total volume/clearance volume.

### ANSWER: (d)

- 20. Diesel cycle consists of
- (a) Two adiabatic and two constant volume processes
- (b) Two adiabatic and two constant pressure processes
- (c) Two adiabatic, one constant pressure and one constant volume processes
- (d) Two isothermal, one constant pressure and one constant volume processes

#### ANSWER: (c)

- 21. For the same compression ratio, the efficiency
- Of diesel cycle as compared to otto cycle is
- (a) Less
- (b) More
- (c) Equal
- (d) None of the above

#### ANSWER: (a)

- 22. The compression ratio for diesel engine is
- (a) 3 to 6
- (b) 5 to 8
- (c) 15 to 20

nups.//ypicinnuranyaui.m

(d) 20 to 30

ANSWER: (c)

- 23. In Carnot cycle, heat is rejected at constant
- (a) Volume
- (b) Pressure
- (c) Temperature
- (d) Entropy
- ANSWER: (c)
- 24. The areal of p-V diagram for a Carnot cycle represents
- (a) Heat supplied
- (b) Heat rejected
- (c) Work done
- (d) Temperature drop ANSWER: (c)
- 25. In Carnot cycle, the algebraic sum of the entropy changes for the cycle is
- (a) Positive
- (b) Negative
- (c) Zero
- (d) None of the above

### ANSWER: (c)

26 An open system is one in which

(a) heat and work cross the boundary of the system, but the mass of the working substance does not

(b) mass of working substance crosses the boundary of the system but the heat and work do not (c) both the heat and work as well as mass of the working substances cross the boundary of the system

(d) neither the heat and work nor the mass of the working substances cross the boundary of the system.

ANSWER: (c)

27. An isolated system
(a) is a specified region where transfer of energy and/or mass take place
(b) is a region of constant mass and only energy is allowed to cross the boundaries
(c) cannot transfer either energy or mass to or from the surroundings
(d) is one in which mass within the system is not necessarily constant
(e) none of the above.
ANSWER: (c)
28. In an extensive property of a thermodynamic system

(a) extensive property of a thermodynamic system
(a) extensive heat is transferred (b) extensive work is done
(c) extensive energy is utilised (d) all of the above
(e) none of the above.

ANSWER: (e)

29. Which of the following is an intensive property of a thermodynamic system ?(*a*) Volume (*b*) Temperature(*c*) Mass (*d*) Energy.ANSWER: (b)

30. Which of the following is the extensive property of a thermodynamic system ?(a) Pressure (b) Volume(c) Temperature (d) Density.ANSWER: (b)

31. When two bodies are in thermal equilibrium with a third body they are also in thermal equilibrium with each other. This statement is called
(a) Zeroth law of thermodyamics (b) First law of thermodynamics
(c) Second law of thermodynamics (d) Kelvin Planck's law.
ANSWER: (a)

32. The temperature at which the volume of a gas becomes zero is called(a) absolute scale of temperature (b) absolute zero temperature(c) absolute temperature (d) none of the aboveANSWER: (b)

33. The value of one bar (in SI units) is equal to (a)  $100 \text{ N/m}^2$  (b)  $1000 \text{ N/m}^2$ (c)  $1 \times 104 \text{ N/m}^2$  (d)  $1 \times 105 \text{ N/m}^2$ (e)  $1 \times 106 \text{ N/m}^2$ . ANSWER: (d)

34. The absolute zero pressure will be (a) when molecular momentum of the system becomes zero (b) at sea level (c) at the temperature of -273 K (d) under vacuum conditions (e) at the centre of the earth. ANSWER: (a)

35. Absolute zero temperature is taken as
(a) - 273°C (b) 273°C
(c) 237°C (d) - 373°C.
ANSWER: (a)

36. Which of the following is correct?

(a) Absolute pressure = gauge pressure + atmospheric pressure

(b) Gauge pressure = absolute pressure + atmospheric pressure

(c) Atmospheric pressure = absolute pressure + gauge pressure

(d) Absolute pressure = gauge pressure – atmospheric pressure. ANSWER: (a)

37. The latent heat of vapourisation at critical point is

- (a) less than zero (b) greater than zero
- (c) equal to zero (d) none of the above.

#### ANS:C

- 38. Choose the correct answer :
- (a) Specific volume of water decreases on freezing
- (b) Boiling point of water decreases with increasing pressure
- (c) Specific volume of CO2 increases on freezing
- (d) Freezing temperature of water decreases with increasing pressure.

#### ANS: (d)

- 39. Choose the correct answer :
- (a) The slope of vapourisation curve is always negative
- (b) The slope of vapourisation curve is always positive
- (c) The slope of sublimation curve in negative for all pure substances
- (d) The slope of fusion curve is positive for all pure substances.

ANS:A

20. With the increase in pressure

(a) boiling point of water increases and enthalpy of evaporation increases

(b) boiling point of water increases and enthalpy of evaporation decreases

(c) boiling point of water decreases and enthalpy of evaporation increases.

ANS:B

21. Choose the correct answer :

(a) Critical point involves equilibrium of solid and vapour phases

(b) Critical point involves equilibrium of solid and liquid phases

(c) Critical point involves equilibrium of solid, liquid and vapour phases

(d) Triple point involves equilibrium of solid, liquid and vapour phases.

ANS: D

24. Dryness fraction of steam is defined as

(a) mass of water vapour in suspension/(mass of water vapour in suspension + mass of dry steam)

(b) mass of dry steam/mass of water vapour in suspension

(c) mass of dry steam/(mass of dry steam + mass of water vapour in suspension)

(d) mass of water vapour in suspension/mass of dry steam.

### ANS:C

25. The specific volume of water when heated at 0°C

(a) first increases and then decreases (b) first decreases and then increases

(c) increases steadily

ANS: B

#### MECHANICAL ENGINEERING

#### **Basic Concepts of Thermodynamics**

1. A definite area or space where some thermodynamic process takes place is known as

- (a) thermodynamic system (b) thermodynamic cycle
- (c) thermodynamic process (d) thermodynamic law.
- 2. An open system is one in which

(a) heat and work cross the boundary of the system, but the mass of the working substance does not

(b) mass of working substance crosses the boundary of the system but the heat and work do not

(c) both the heat and work as well as mass of the working substances cross the boundary of the system

(d) neither the heat and work nor the mass of the working substances cross the boundary of the system.

3. An isolated system

(a) is a specified region where transfer of energy and/or mass take place

- (b) is a region of constant mass and only energy is allowed to cross the boundaries
- (c) cannot transfer either energy or mass to or from the surroundings
- (d) is one in which mass within the system is not necessarily constant

(e) none of the above.

4. In an extensive property of a thermodynamic system

(a) extensive heat is transferred (b) extensive work is done

(c) extensive energy is utilised (d) all of the above

(e) none of the above.

5. Which of the following is an intensive property of a thermodynamic system ?

(a) Volume (b) Temperature

(c) Mass (d) Energy.

6. Which of the following is the extensive property of a thermodynamic system ?

(a) Pressure (b) Volume

(c) Temperature (d) Density.

**7.** When two bodies are in thermal equilibrium with a third body they are also in thermal equilibrium with

each other. This statement is called

(a) Zeroth law of thermodynamics (b) First law of thermodynamics

(c) Second law of thermodynamics (d) Kelvin Planck's law.

8. The temperature at which the volume of a gas becomes zero is called

(a) absolute scale of temperature (b) absolute zero temperature

(c) absolute temperature (d) none of the above.

9. The value of one bar (in SI units) is equal to

(a)  $100 \text{ N/m}^2$  (b)  $1000 \text{ N/m}^2$ 

(c)  $1 \times 104 \text{ N/m}^2$  (d)  $1 \times 105 \text{ N/m}^2$ 

(e)  $1 \times 106 \text{ N/m}^2$ .

**10.** The absolute zero pressure will be

(a) when molecular momentum of the system becomes zero

nups.//yptctmnuranyau.a

- (b) at sea level
- (c) at the temperature of -273 K
- (d) under vacuum conditions (e) at the centre of the earth.
- **11.** Absolute zero temperature is taken as
- (a)  $-273^{\circ}$ C (b) 273°C
- (c) 237°C (d)  $- 373^{\circ}$ C.
- **12.** Which of the following is correct ?
- (a) Absolute pressure = gauge pressure + atmospheric pressure
- (b) Gauge pressure = absolute pressure + atmospheric pressure
- (c) Atmospheric pressure = absolute pressure + gauge pressure
- (d) Absolute pressure = gauge pressure atmospheric pressure.
- **13.** The unit of energy in SI units is
- (a) Joule (J) (b) Joule metre (Jm)
- (c) Watt (W) (d) Joule/metre (J/m).
- 14. One watt is equal to
- (a) 1 Nm/s (b) 1 N/min
- (c) 10 N/s (d) 100 Nm/s
- (e) 100 Nm/m.
- **15.** One joule (J) is equal to
- (a) 1 Nm (b) kNm
- (d) 10 Nm/s (d) 10 kNm/s.
- 16. The amount of heat required to raise the temperature of 1 kg of water through 1°C is called
- (a) specific heat at constant volume (b) specific heat at constant pressure
- (c) kilo calorie

- (d) none of the above.
- 17. The heating and expanding of a gas is called
- (a) thermodynamic system (b) thermodynamic cycle
- (c) thermodynamic process (d) thermodynamic law.
- 18. A series of operations, which take place in a certain order and restore the initial condition is known as
- (a) reversible cycle (b) irreversible cycle
- (c) thermodynamic cycle (d) none of the above.
- **19.** The condition for the reversibility of a cycle is
- (a) the pressure and temperature of the working substance must not differ, appreciably, from those of the
- surroundings at any stage in the process
- (b) all the processes, taking place in the cycle of operation, must be extremely slow
- (c) the working parts of the engine must be friction free
- (d) there should be no loss of energy during the cycle of operation
- (f) none of the above. (e) all of the above
- **20.** In an irreversible process, there is a
- (a) loss of heat (b) no loss of heat

- 21. The main cause of the irreversibility is
- (a) mechanical and fluid friction (b) unrestricted expansion
- (c) heat transfer with a finite temperature difference
- (d) all of the above (e) none of the above.
- 22. According to kinetic theory of heat
- (a) temperature should rise during boiling (b) temperature should fall during freezing
- (c) at low temperature all bodies are in solid state
- (d) at absolute zero there is absolutely no vibration of molecules
- (e) none of the above.
- 23. A system comprising a single phase is called a
- (a) closed system (b) open system
- (c) isolated system (d) homogeneous system
- (e) heterogeneous system.

### Answers

**1.** (a) **2.** (c) **3.** (c) **4.** (e) **5.** (b) **6.** (b) **7.** (a) **8.** (b) **9.** (d) **10.** (a) **11.** (a) **12.** (a) **13.** (a) **14.** (a) **15.** (a) **16.** (c) **17.** (b) **18.** (c) **19.** (e) **20.** (a) **21.** (d) **22.** (d) **23.** (d).

### Mechanical

1. A cycle consisting of one constant pressure, one constant volume and two isentropic processes is known as

- A. Carnot cycle
- B. Stirling cycle
- C. Otto cycle
- D. Diesel cycle

Ans: D

2. The amount of heat required to raise the temperature of the unit mass of gas through one degree at constant volume, is called

- A. specific heat at constant volume
- B. specific heat at constant pressure
- C. kilo Joule

mups.//ypicinii uranyaui.m

D. none of these

Ans:A

- 3. An adiabatic process is one in which
- A. no heat enters or leaves the gas
- B. the temperature of the gas changes
- C. the change in internal energy is equal to the mechanical workdone
- D. all of the above

### Ans:D

4. The processes occurring in open system which permit the transfer of mass to and from the system, are known as

- A. flow processes
- B. non-flow processes
- C. adiabatic processes
- D. none of these

Ans:A

### MULTIPLE CHOICE QUESTIONS

1. In a four stroke cycle, the minimum temperature inside the engine cylinder occurs at the

- A. beginning of suction stroke B. end of suction stroke
- C. beginning of exhaust stroke D. end of exhaust stroke

2. The exhaust valve in a four stroke cycle petrol engine

- A. opens at  $50^{\circ}$  before bottom dead centre and closes at  $15^{\circ}$  after top dead centre
- B. opens at bottom dead centre and closes at top dead centre
- C. opens at  $50^{\circ}$  after bottom dead centre and closes at  $15^{\circ}$  before top dead centre
- D. may open and close anywhere

### Downloaded from www.gptcthirurangadi.in

nups.//ypiciniruranyaui.m

3. The working cycle in case of four stroke engine is completed in following number of revolutions of crankshaft

- (a) 1/2 (b) 1 (c) 2 (d) 4
- 4. . Scavenging air in diesel engine means
- (a) air used for combustion sent under pressure (b) forced air for cooling cylinder
- (c) burnt air containing products of com-bastion
- (d) air used for forcing burnt gases out of engine's cylinder during the exhaust period
- 5. . Supercharging is the process of

(a) supplying the intake of an engine with air at a density greater than the density of the surrounding atmosphere

- (b) providing forced cooling air
- (c) injecting excess fuel for raising more load
- (d) supplying compressed air to remove combustion products fully
- 6. . If the intake air temperature of I.C. engine increases, its efficiency will
- (a) increase (b) decrease (c) remain same (d) unpredictable

7. In a typical medium speed 4-stroke cycle diesel engine the inlet valve

- (a) opens at  $20^{\circ}$  before top dead center and closes at  $35^{\circ}$  after the bottom dead center
- (b) opens at top dead center and closes at bottom dead center
- (c) opens at  $10^{\circ}$  after top dead center and closes  $20^{\circ}$  before the bottom dead center
- (d) may open or close anywhere

8. The pressure and temperature at the end of compression stroke in a petrol engine are of the order of

- (a) 4 6 kg/cm2 and 200 250°C
- (b) 6 12 kg/cm2 and 250 350°C

(c) 12 - 20 kg/cm2 and 350 - 450°C 500°C

(d) 20 - 30 kg/cm2 and 450 -

- 9. . Pick up the wrong statement
- (a) 2-stroke engine can run in any direction

nups.//gptctmrurangaui.m

- (b) In 4-stroke engine, a power stroke is obtained in 4-strokes
- (c) thermal efficiency of 4-strokc engine is more due to positive scavenging
- (d) petrol engines occupy more space than diesel engines for same power output. Ans d
- 10. Combustion in compression ignition engines is
- (a) homogeneous (b) heterogeneous
- (c) both (a) and (b) (d) laminar

11 The fuel in diesel engine is normally injected at pressure of

(a)  $5-10 \text{ kg/cm}^2$  (b)  $20-25 \text{ kg/cm}^2$  (c)  $60-80 \text{ kg/cm}^2$  (d)  $90-130 \text{ kg/cm}^2$ 

12Crankcase explosion in I.C. engines usually occurs as

- (a) first a mild explosion followed by a bi explosion
- (b) first a big explosion followed by a mil explosion
- (c) both mild and big explosions occi simultaneously
- (d) never occurs
- 13. The air-fuel ratio of the petrol engine is controlled by
- (a) fuel pump (b) governor (c) injector (d) carburetor

14. At very low temperature, the melting and boiling temperatures become equal. This temperature is

(a)  $373^{\circ}$ K (b)  $273.16^{\circ}$ K (c)  $303^{\circ}$ K (d)  $0^{\circ}$ K.

15. The latent heat of steam at pressures greater than atmospheric in comparison to latent heat at atmospheric pressure is

(a) less (b) more (c) equal (d) may be less or more depending on temperature

16. One kg of steam sample contains 0.8 kg dry steam; it's dryness fraction is

(a) 0.2 (b) 0.8 (c) 1.0 (d) 0.6

17. While steam expands in turbines, theoretically the entropy

- 1. Internal gears can be made by
- A. hobbing
- B. shaping with pinion cutter
- C. shaping with rack cutter
- D. milling stroke ANS:B
- 2. Drilling is an example of
- A. orthogonal cutting

nups.//ypicinii uranyaui.iii

- B. oblique cutting
- C. simple cutting
- D. uniform cutting ANS:B
- 3. The work or surface speed for cylindrical grinding varies from
- A. 5 to 10 m/min
- B. 10 to 20 m/min
- C. 20 to 30 m/min
- D. 40 to 60 m/min ANS:C

4. The method of grinding used to produce a straight or tapered surface on a workpiece, is

- A. internal cylindrical grinding
- B. form grinding
- C. external cylindrical grinding
- D. surface grinding ANS:C

5.In up milling, the thickness of chip is

- A. minimum at the beginning of the cut and maximum at the end of the cut
- B. maximum at the beginning of the cut and minimum at the end of the cut
- C. uniform throughout the cut
- D. none of these ANS:A
- 6. Lapping is an operation of
- A. making a cone-shaped enlargement of the end of a hole
- B. smoothing and squaring the surface around a hole
- C. sizing and finishing a small diameter hole
- D. producing a hole by removing metal along the circumference of a hollow cutting tool

ANS: C

7. Which of the following operations can be performed with milling cutters?

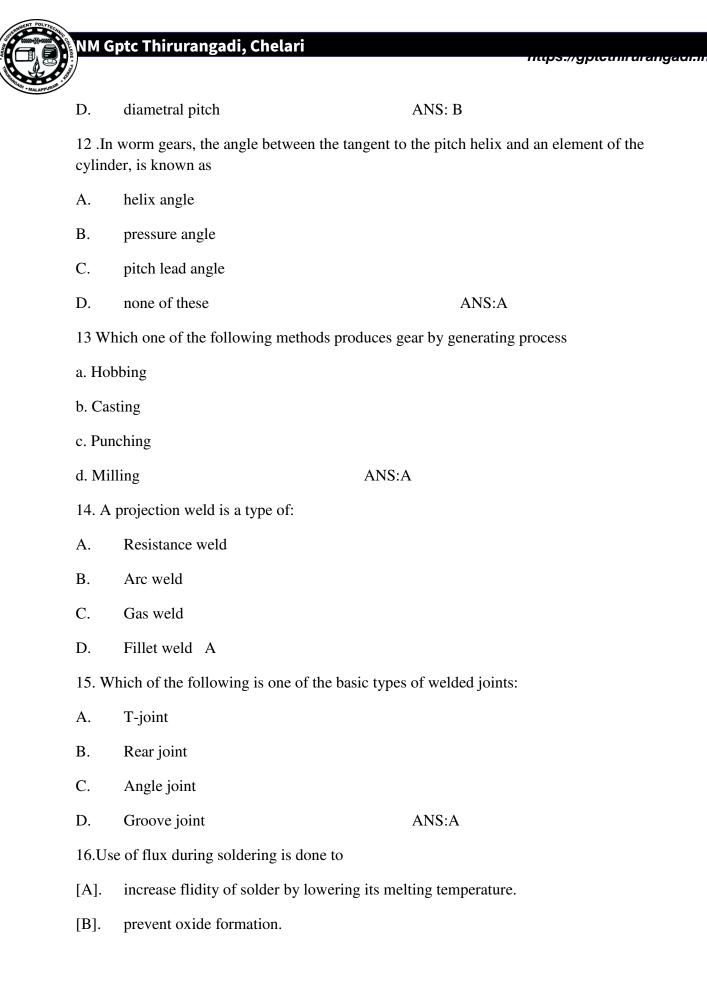

А.	cutting key ways on shafts
B.	cutting external screw threads
C.	cutting teeth of spur gears
D.	all of these
8	Surface grinding is done to produce
A.	tapered surface
B.	flat surface

- C. internal cylindrical holes
- D. all of these ANS: B
- 9. Cutting fluids are used to
- A. cool the tool
- B. improve surface finish
- C. cool the workpiece
- D. all of these ANS: D
- 10. An open belt drive is used when
- A. shafts are arranged parallel and rotate in the opposite directions
- B. shafts are arranged parallel and rotate in the same directions
- C. shafts are arranged at right angles and rotate in one definite direction
- D. driven shaft is to be started or stopped whenever desired without interferring with the driving shaft

ANS: D

### ANS: B

- 11 The size of a gear is usually specified by
- A. pressure angle

21. C	fores are used to	0		
A.	form internal	cavities	in the casting	
B.	improve moul	d surfa	ce	
C.	form a part of	a greer	a sand mould	
D.	all of these			ANS:D
		•		

22 The operation of cutting a cylindrical hole in a sheet of metal by the punch and die is called

nups.//ypicini/uranyaui.ii

- A. shearing B. piercing
- C. punching D. blanking ANS:C
- 23. In skew bevel gearing, the axes of shafts are
- A. intersecting and the teeth are curved
- B. non-intersecting and non-parallel and the teeth are curved
- C. non-intersecting and non-parallel and the teeth are straight
- D. none of the above ANS: C
- 24. When a belt drive is transmitting maximum power,
- A. effective tension is equal to centrifugal tension
- B. effective tension is half of centrifugal tension
- C. driving tension on slack side is equal to centrifugal tension
- D. driving tension on tight side is twice the centrifugal tension ANS:D
- 25. Gears are casted by
- A. sand mould casting
- B. slush casting
- C. permanent mould casting
- D. centrifugal casting ANS: C
- 26. The gears are termed as medium velocity gears, if their peripheral velocity is
- A. 1-3 m/s
- B. 3-15 m/s

Re.				
	Gptc Thir	urangadı,	Chelari	nups.//gptcumurangaui.
C.	15-30 m	n/s		
D.	30-50 m	n/s		ANS: B
27.7	The groove	angle of the	e pulley for rope of	drive is usually
A.	20° I	B. 35°		
C.	45° I	D. 60°		ANS:C
28.7	The coeffici	ient of frict	ion between the b	elt and pulley depends upon the
A.	material	of belt and	l pulley	
В.	slip of b	oelt		
C.	speed of	f belt		
D.	all of the	ese		ANS:D
29.7	The operation	on of cuttin	g of a flat sheet to	the desired shape is called
A.	shearing	g B.	piercing	
C.	punchin	g D.	blanking	ANS:D
30.E	Extrusion			
А.	is extens	sively used	for making bolts	and nuts

B. is used for reducing the diameter of round bars and tubes by rotating dies which open and close rapidly on the work

C. is used to improve fatigue resistance of the metal by setting up compressive stresses in its surface

D. consists of pressing the metal inside a chamber to force it out by high pressure through an orifice which is shaped to provide the desired form of the finished part

ANS:D

#### MULTIPLE CHOICE QUESTIONS

#### \_\_\_\_\_

- The standard value of atmospheric pressure taken at sea level is

   a. 1. 013 bar
   b. 760 mm of Hg
  - c.  $1013 \times 10^2 \text{ N/m}^2$  d. all of these
- 2. In a parsons reaction turbine the degree of reaction is

A) <u>4</u>	B) 2
5	3
C) <u>1</u>	D <u>)1</u>
2	4

3. In a velocity compounded impulse turbine, while steam flows through the

second row of moving blades

- A) The velocity remains constant
- B) The velocity reduces
- C) The velocity increases
- D) Both velocity as well as pressure increases
- 4. The reading of the pressure gauge fitted on a vessel is 25 bar. The atmospheric pressure is 1.03 bar and the value of 'g' is  $9.81 \text{ m/s}^2$ . The absolute pressure in the vessel is
  - a. 23.97 bar b. 25 bar

c. 26.03 bar d. 34.81 bar

- 5. The process in a Rankine are
  - A) Two isothemal and two isentropic
  - B) Two isothemal and two isentropic
  - C) Two isothemal and two polytropic
  - D) None of the above
- **6.** In case of pressure compounded impulse turbine, for the steam while flowing through the nozzle of second stage.
  - E) Pressure and velocity both increase
  - F) Pressure and velocity both decreases

- G) Pressure increases while velocity decreases
- H) Pressure drops while velocity increases.
- **7.** The heat and mechanical work are mutually convertible. This statement was established by
  - a. Boyle b. Charles c. Joule D. None of these
- 8.The dryness fraction of steam within a turbine is usually not allowed to fall below<br/>A) UnityB) 0.99C) 0.90D) 0.45
- 9. Which of the following statement is correct?a. The heat and work are boundary phenomeana
  - b. The heat and work represent the energy crossing the boundary of the system
  - c. The heat and work are path functions
  - d. All of the above
- 10. Rateau turbine is a
  - A) Velocity compounded impulse turbine
  - B) Velocity compounded reaction turbine
  - C) Pressure compounded reaction turbine
  - D) Pressure compounded impulse turbine
- 11 The measurement of a thermodynamics property known as temperature is based on a. Zeroth law of thermodynamics b. First law of thermodynamics
  - c. Second law of thermodynamics d. None of these
- 12. Steam leaves the steam nozzle at
  - A) Low pressure and low velocity B) Low pressure and high velocity
  - C) Hire pressure and low velocity D) High pressure and high velocity
- 13 The heat flows from a cold body to a hot body with the aid of an external source. This statement is given by

a. Kelvin	b. Joule	c. Clausious	d. Gay - Lussac
-----------	----------	--------------	-----------------

14. Which of the following is not needed in case of magneto ignition?

nups.//ypicini uranyaui.m

AN .							
		A) distributor B) Coil	C) Spark plug	g D) Battery			
	15.	The term scavenging i	s generally associated	d with			
		A) Vertical engine		B) Multi-cylinder eng	ines		
		C) Two stroke engines	5	D) Air cooled engines			
	16.	Relation between $c_p$ a	nd $c_v$ is given by				
		a. $\frac{c_v}{c_p} = R$	b. $c_p - c_v = R$	$c. \ c_v = \frac{R}{(r-1)}$	d. all of these		
	17.	In a petrol engine as t	he speed increases				
		A) the spark intensity	has to be increased				
		B) the spark intensity	has to be reduced				
		C) The spark has to be	advanced				
		D) The spark has to be	e retarded				
	18.	A camshaft is not prov	vided in case of				
		A) Vertical engines		B) High speed engines			
		C) Two stroke engines	5	D) Multicyliner engine	25		
	19	When a gas is heated,	change takes place i	n			
		a. pressure	b. volume	c. temperature	d. all of these		

20. Solid injection in diesel engines implies

A) Use of solid fuelsB) Injecting fuel without air

C) Supply of fuel in the form of solid

- 21. The efficiency of a diesel cycle increases with
  - A) increase in cut off

D)Injecting fuel and air simultaneously

- B) decrease in cut off
- C) decrease in depression ratio
- D) none of the above
- 22. Which of the following is the intensive property of a thermodynamic system?
  - a. Volume b. Temperature c. Mass d. Energy
- 23. When the circulation of water, in a boiler, is by convection currents which are set up during the heating of water, then the boiler is known as
  - a. internally fired boiler b. externally fired boiler
    - c. natural circulation boiler d. forced circulation boiler
- 24. A device used to put off fire in the furnace of the boiler when the level of water in the boiler falls to an unsafe limit, is called
  - a. blow off cock b. stop valve c. super heater d. none of these
- 25. The function of a distributor in a coil ignition system of IC engines is

a. to distribute spark	b. to distribute power

- c. to distribute current d. to time the spark
- 26. When the expansion or compression takes place according to the law  $pv^n = C$ , the process is known as

a. isothermal process	b. adiabatic process
c. hyperbolic process	d. polytropic process

- 27. The property of a working substance which increases or decreases as the heat is supplied or removed in a reversible manner, is known as
  - a. enthalpy b. internal energy c. entropy d. external energy
- 28. The condition for an irreversible cyclic process is
  - a.  $\oint \frac{\partial Q}{T} = 0$  b.  $\oint \frac{\partial Q}{T} < 0$  c.  $\oint \frac{\partial Q}{T} > 0$  d. none of these
- 29. The efficiency of Carnot cycle depends upon

a. temperature limits b. pressure ratio

c. volume compression ratio d. cutt-off ration and compression ratio

- 30. The exhaust valve in a four stroke cycle petrol engine
  - a. opens at 50° before bottom dead centre and closes at 15° after top dead centre
  - b. opens at bottom dead centre and closes at top dead centre
  - c. opens at 50° after bottom dead centre and closes at 15° before top dead centre

d. may open and close anywhere

- 31. In a coil ignition system of petrol engines, a condenser is connected across the contactbreaker in order to
  - a. prevent sparking across the gap between the points

b. cause more rapid break of the primary current, giving a higher voltage in the secondary circuit

c. both (a) and (b) c. none of these

32. Otto cycle is also known as

a. constant pressure cycle
b. constant volume cycle
c. constant temperature cycle
d. constant temperature and pressure
cycles

- 33. When the gas is heated at constant volume, the heat supplied
  - a. increases the internal energy of the gas b. increases the enthalpy of the gas
  - c. does some external work during expansion d. all of these
- 34. The specific heat of a gas at constant pressure
  - a. is equal to the specific heat at constant volume
  - b. is two times the specific heat at constant volume
  - c. is always greater than the specific heat at constant volume
  - d. none of the above.
- 35. The change of enthalpy (dH) is equal to heat in interchange Q in case of

- a. non-flow constant volume process
- b. non-flow constant pressure process
- c. non-flow isothermal process
- d. none of the above
- 36. Work done in expansions is equal to heat supplied in case of
  - a. non-flow constant volume process
  - b. non-flow constant pressure process
  - c. non-flow isothermal process
  - d. none of the above.
- 37. Choose the wrong statement
  - a. displacement work is equal to pdV
  - b. intensive properties are independent of mass
  - c. an isolated system permits the passage of energy only

d. the specific heat of a gas at constant pressure is always greater than specific heat at constant volume.

- 38. During expansion, for the same increase in volume, the pressure drop is
  - a. less in adiabatic process as compared to isothermal process
  - b. less in adiabatic process as compared to constant pressure process
  - c. greater in adiabatic process as compared to isothermal process
  - d. none of the above.

39. Choose the correct statement

- a. in free expansion, the work done = pdv
- b. in free expansion, enthalpy of the fluid changes during the process

c. in adiabatic expansion, the heat is supplied or rejected to the surrounding

d. in free expansion, the external heat supplied is zero and external work done is also zero.

- 40. Unit of universal gas constant is
  - a. N m kg/oK b. Nm/kg mol K
  - c. m/oK d. kg-m/oK
- 41. Bar is the unit of
  - a. power b. energy
  - c. pressure d. entropy
- 42. Choose the correct statement
  - a. Entropy is an intensive property
  - b. Density is an extensive property
  - c. Density is an intensive property
  - d. Pressure is an extensive property.
- 43. The thermal efficiency of an engine, which is supplied heat at the rate of 15,000 N m/s and output of 4500W, is
  - a. 45% b. 50%
  - c. 30% d. 33%
- 44. A perpectual motion machine of the first kind defined as a machine which produces power without consuming any energy is
  - a. impossible according to second law of thermodynamics
  - b. impossible according to first law of thermodynamics
  - c. possible according to first law of thermodynamics

nups.//gpicaniaranyaai.m

- d. possible according to second law of thermodynamics
- 45. For atmospheric air, ratio  $Cp/C_V$ , is equal to
  - a. 0.171 b. 1.4
  - b. 1.20 d. 1.3
- 46. According to Kelvin Planck statement a perpetual motion machine.
  - a. of second kind is possible
  - b. of first kind is possible
  - c. of second kind is impossible
  - d. of first kind is impossible

47. In a Carnot cycle, heat is supplied at  $227^{\circ}$ C and heat is rejected at 270C, the efficiency of the cycle will be

- a. 80%
- b. 40%
- c. 66.67%
- d. 60%

48. The Carnot cycle cannot be realized in actual practice due to

- a. very high pressure developed in the cylinder
- b. high volume ratios in the cylinder
- c. both (a) and (b)
- d. none of the above.
- 49. The relationship between entropy, enthalpy and work is given by
  - a. Tds = dH+ Vdp
  - b. dH = Vdp Tds

mups.//ypicinii uranyaui.m

- c. Tds = dH Vdp
- d.  $Vdp = \frac{dH}{Tds}$
- 50. The law that states that the absolute pressure of a given mass of a prefect gas varies inversely at its volume when the temperature remains constant is known as
  - a. Charle's law
  - b. Boyle'slaw
  - c. Gay –Lussac law
  - d. Avogadro's law.
- 51. A gas follows the law  $pV^n = C$  if the value of n = 1.3, the processes is known as
  - a. adiabatic
  - b. isothermal
  - c. isentropic
  - d. polytropic
- 52. At a temperature of 227°C the heat supplied to an engine is 250 KJ per second. Heat rejected takes place at a constant temperature of 27°C. If heat rejected is 200 KJ/sec. then applying clausius inequality, determine whether the process would be.
  - a. irreversible b. reversible
  - c. impossible d. none of the above
- 53. Liquids have
  - a. one specific heat
  - b. two specific heats
  - c. three specific heats
  - d. none of the above
- 54. In a four stroke engine, each cylinder has
  - (a) One valve (b) Two valves (c) Three valves

nups.//yptctmruranyaui.m

- (d) Number of valves depends upon the engine design
- 55. The firing order in case of four cylinder in-line engines is usually
  - (a) 1-2-4-3 (b) 1-3-4-2(c) 1-3-2-4 (d) Either (b) or (c)
- 56. For balancing single cylinder engine a counter weight is added to
  - (a)Piston (b) Connecting rod
  - (c)Crankshaft (d) Gudgeon pin
- 57. The 'stroke ' of an engine is the
  - (a) Volume of the cylinder (b) Length of the connecting rod
  - (c) Internal diameter of the cylinder (d) Distance between TDC and BDC
- 58. What is the material of connecting rod ?
  - (a) Mild steel (b) Forged steel (c) Tool steel (d) Cast iron
- 59. In internal combustion (I.C) engines, combustion of fuel takes place
  - (a) Outside the cylinder
  - (b) Inside the cylinder
  - (c) Not in the cylinder
  - (d) None of the above
- 60. In an I.C engine the ratio of volume displaced by the piston per stroke to clearance volume in cylinder, is known as
  - (a) expansion ratio (b) compression ratio
  - (c) combustion ratio (d) none of the above
- 61. The impeller of a centrifugal pump may have a. volute casing b. volute casing with guide blades
  - c. vortex casing d. any one of these
- 62. In a centrifugal pump, the regulating valve is provided on the

66.

67.

APPURAM						
		a. casing			b. delivery pipe	
		c. suction pipe		d. impe	eller	
	63. An air pre	heater is installed a. before the econom	izer	b. befc	re the super-heater	
		c. between the econo	mizer and chin	nney	d. none of these	
	64. The C.O.P.	-	or in winter wil b. lower	l be	as compared to C.O.P. in s c. higher	ummer
	65. The metal	is subjected to mechar a. refining grain size	nical working fo	or		
		b. reducing original bl	ock into desire	d shape	2	
		c. controlling the dired	ction of flow lir	nes		
		d. all of these				
	The tempe	erature at which the ne a. lower critical tempe	-			
		c. eutectic temperatu	re	d.recry	stallization temperature	
	The electr	odes used in spot weld a. stainless steel	ing have a tip o b. aluminium		er d. brass	

68. Which of the following pump is suitable for small discharge at high heads? a. Centrifugal pump b. Axial flow pump

- c. Mixed flow pump d. Reciprocating pump.
- 69. Head developed by a centrifugal pump is a. proportional to diameter of impeller
  - b. proportional to speed of impeller

nups.//ypicinnuranyaui.m

d. none of the above.

- 70. . A two high rolling mill consists of two rolls which rotate a. at the same speed and in the same direction
  - b. at the same speed but in opposite direction
  - c. at different speeds and in the same direction
  - d. at different speeds and in the opposite direction
- 71. The absolute humidity is defined as
  - a. the mass of water vapour present in 1 m3 of dry air

b. the mass of water vapour present in 1 kg of dry air

c. the ratio of the actual mass of water vapour in a unit mass of dry air to the mass of water vapour in the same mass of dry air when it is saturated at the same temperature and pressure

d. the ratio of actual mass of water vapour in a given volume of moist air to the mass of water vapour in the same volume of saturated air at the same temperature and pressure

72. Which of the following welding process uses non-consumable electrodes? a. TIG welding b. MIG welding

c. Manual are welding d. Submerged are welding

73. A refrigeration system

a. removes heat from a low temperature body and delivers it to a high temperature body

b. removes heat from a high temperature body and delivers it to a low temperature body

c. rejects energy to a low temperature body

d. none of the above

74. One tonne of refrigeration (1TR) means that the heat removing capacity isa. 21 kJ/minb. 210 kJ/min c. 420 kJ/mind. 620 kJ/min

Ÿ						
		e of dry air and bour into it, is c		when the air has diff	used the maxim	um amount of
		a. dry air	b. moist air	c. saturated air	d.specific hu	midity
	76. R-118 is					
		a) CO2	b)ammonia	c) water	d) CH	14
	77. The absol	ute zero tempe			2270 0	1 2270 0
		a. −273°C	b. 27.	3°С с. –	-237°C	d. −237°C
	78. If the net	positive suction a. no flow wil		required for pump is b. cavitatio	s not satisfied, th n will be forme	
		c. efficiency	will be low			
		d. excessive	power will be	consumed.		
	70 Which of	the following is	corroct2			
		-		ge pressure + Atmos	pheric pressure	
		b. Gauge pres	ssure	= Absolute pressur	e+Atmospheric	pressure
		c. Atmospher	ic pressure	= Absolute pressur	e + Gauge press	ure
		d. Absolute p	ressure = Gau	ge pressure – Atmos	pheric pressure	
	80. Slip of a r	eciprocating pu	•	as the o the theoretical dis	charge	
			_		-	
		b. sum of acti	ual discharge a	nd the theoretical di	scharge	
		c. difference	of theoretical o	lischarge and the act	tual discharge	
		d. product of	theoretical dis	charge and the actua	al discharge	
	81 The ratio	of heat extract	ed in the refrig	erator to the work d	one on the refri	perant is called
			-	e of refrigeration		
		h coofficient	of porformone	o of hoot nump		

nups.//ypiciniruranyaui.m

- b. coefficient of performance of heat pump
- c. relative coefficient of performance
- d. refrigerating efficiency

пцрз.//урссилгигануаан.лг

d) CH4

82. R-290 is

- a) CO2 b)ammonia c) water
- 83. In order to avoid cavitation in centrifugal pumps a. the suction pre. should be high
  - b. the delivery pre. should be high.
  - c. the suction pre. should be low
  - d. the delivery pre should be low.
- 84. Which of the following pump is generally used to pump highly viscous fluid? a. centrifugal pump b. reciprocating pump

c)airliftpump

d. screw pump.

- 85. R 12 is
- a. non-toxic and non-flammable
- b. of white colour and odourless
- c. extremely toxic and non-flammable
- d. colourless and odourless
- 86. According to moulding sand which one is the wrong statement
  - a. It is inexpensive
  - b. It can be used again and again
  - c. It cannot makes a mould porous
  - d. It maintains shape at very high temperature
- 87.the distance measured on the circumference of the pitch circle from a point of one tooth to the corresponding point on the next tooth

a) circular pitch b) diametral pitch c) pitch circle diameter d) none

88. the ratio of number of teeth to the pitch circle diameter in mma) circular pitchb) diametral pitch

c) pitch circle diameter

d) module

- 89. the difference between the tooth space and the tooth thickness is calleda) tooth space difference b) back lash c) clearance d) none
- 90. the apex of the pitch cone is
  - a) cone distance b) back cone c) cone center d) addendum
- 91. the distance of the back of the boss from the cone center is called a) crown height b) mounting height

c) back cone distance d) cone distance

92. the linear distance through which a point one thread moves ahead in one revolution of the worm

a) pitch b) axial pitch c) lead d) all of these

93. normal pitch (Pn) is equal to

a) Pn = Pa Cos  $\theta$  b) Pn = Pa c) Pn = Pa sin $\theta$  d) Pn = Pa/Cos $\theta$ 

where  $\theta$  and Pa is the helix angle and axial pitch

94. the difference between D.B.T and DPT is called a) dew point depression b) dry

on b) dry bulb depression

c) wet bulb depression d) none

95. curved lines in psychromretric chart is called

a) constant RH lines b) constant wbt lines c) constant enthalpy lines

d) constant DBT lines

- 96. horizontal lines in psychromretric chart is called a) constant RH lines b) constant wbt lines
  - c) constant humidity ratio lines d) constant DBT lines
- 97. vertical lines in psychromretric chart is calleda) constant RH linesb) constant wbt lines
  - c) constant enthalpy lines d) constant DBT lines

98. in saturated air the WBT is equal to

NM Gptc Thiru	angadi, Chel	ar
---------------	--------------	----

	108.	when	will the negativ a) cd	-			c) cd >	1		d) cd = 0				
	109.	the ra	tio in efficiency a) 1		ifugal pump b) less than	-	-		n same d) half	-				
			•						-					

nups.//gptctmi urangaui.m

110. in belt drive for transmitting power at velocity of 25 m/s is called ......a) light driveb) heavy drive

c) medium drive

d)small drive

c)  $e^{ heta \cos e c \eta}$ 

111. the tension ratio of flat belt drive is

a)  $e^{\mu heta}$ 

b)  $e^{\mu \cos e c heta}$ 

d)  $e^{\cos e c \eta \theta}$ 

where  $\mu, heta$  is the friction coiffient and angle of contact

- 112. In a simple gear train, if the number of idle gears is even then the motion of driven gear will
  - (a) be opposite as that of driving gear
  - (b) be same as that of driving gear
  - (c) depend on the number of teeth of driving gear
  - (d) none of the above.
- 113. In a simple gear train of four gear wheels, the first gear has 20 teeth, second gear 10 teeth, third gear 10 teeth and the forth gear 40 teeth. The speed ratio of fourth gear to
  - first gear and the direction are
    - (a) ½ and same direction (b) 2 and same direction
    - (c) 2 and opposite direction (d)  $\frac{1}{2}$  and opposite direction.
- 114. The velocity ratio of two pulleys connected by an open belt is(a) directly proportional to the square of their diameters
  - (b) directly proportional to their diameters
  - (c) inversely proportional to their diameters
  - d) inversely proportional to the square of their diameter
- 115. Choose the correct statement.(a) In a crossed belt drive, the directions of rotations of two pulleys connected by it are opposite by it are opposite.
- (b) In open belt drive, the directions of rotations of two pulleys connected by it are same

(c) The angle of contact in crossed belt drive is more than that in an open belt drive.

(d) All the above statement

116. Because of slip of the belt, the velocity ratio of belt

(a) increases (b) decreases (c) does not change

- 117. V belts can be used to connect two shafts up to(a) 2 m apart(b) 3 m apart(c) 4 m apart(d) 6 m apart
- 118. In the gating system the branch passage for the molten metal and which connect the runner and mould cavity is

a. riser b. basin c. sprue d. gate

- 119. In the die casting, which one is the wrong statement a. Equipment cost is less
  - b. Rate of production is high
  - c. Semi- skilled labour is enough
  - d. Good surface finish can be obtained
- 120. In brazing which one is the wrong statement
  - a. faster process b. give good appearance
  - c. not suitable to join thick sheets
  - d. strength of joint is less than soldering
